Notes :

- (1) Test specimen was taken randomly from the sample submitted by client/applicant.
- (2) Whenever 4-aminodiphenyl (CAS number 92-67-1), 2-naphylamine (CAS number 91-59-8) and 4-methoxy-m-phenylene-diamine (CAS number 615-05-4) is found, the use of banned azo colorants cannot be reliably ascertained without additional information, e.g. the chemical structure of the colorants used.
- (3) In case polyurethane materials are used, e.g. PU foams and coatings and in prints, it cannot be ruled out that certain amines, e.g. 4,4'-methylene-dianiline (MDA, CAS number 101-77-9) and 2,4-toluylen-diamine (TDA, CAS number 95-80-7) are released from the PU component and not from a banned azo colorant.
- (4) In case of pigment prints care has to be taken that 4,4'-methylene-dianiline (MDA, CAS number 101-77-9) is not released from a source of banned azo colorants but from e.g. a chemical fixing agent.

Requirement : ≤ 30 mg/kg for each aromatic amine according to Requirement of Entry 43 of Regulation (EC) No. 552/2009 amending Annex XVII of REACH Regulation (EC) No. 1907/2006 (previously restricted under Directive 2002/61/EC).

Annex II: Filling Material Test as per BS 5852: Part 2:1982

This test, specified in Annex A of BS 7176:2007+A1:2011, is based on BS 5852:Part 2:1982 using ignition source 5.

To assess the ignitability of polyurethane foam in slab or cushion form used in upholstered components when subjected to ignition 5.

Test Results:

Test Criteria	Results	
	1 st test	2 nd test
(A) Progressive Smouldering (Clause 4.1 of BS 5852:Part 2:1982)		
① Whether progressive smouldering is observed when beyond 60 minutes after ignition of the crib	NO	NO
② Whether escalating combustion behaviour is observed so that it is unsafe to continue the test	NO	NO
③ Whether any composite smoulders until it is essentially consumed within the test duration.	NO	NO
④ Whether any composite that smoulders to the extremities the specimen viz. upper or lower margins, either side or to its full thickness within the duration of the test	NO	NO
⑤ Whether any composite on final examination shows evidence of charring more than 100mm in any direction	NO	NO
(B) Flaming (Clause 4.2 of BS 5852:Part 2:1982)		
① Whether any composite that continues to flame for more than 10 minutes after the ignition of the crib	NO	NO
② Whether escalating combustion behaviour is observed so that it is unsafe to continue the test	NO	NO
③ Whether any composite is essentially consumed within the test duration	NO	NO
④ Whether any composite display that on which flame front reaches the lower margin, either side or passes through the full thickness of the specimen within the duration of the test	NO	NO
(C) Mass Loss (Clause 5 in Schedule 1 Part 1 of UK Regulations)		
If failure against the criteria of clause 4 of BS 5852 : part 2 has occurred but only by way of damage exceeding the limits defined in A ④, ⑤ and B ④ above and provided that the resultant mass loss is less than 60g the foam passes the ignitability test.	26 g	30 g
